The H. influenzae sequence has been updated by R. Fleischmann. New database matches have been assigned, product names have been improved, and a number of frame shifts have been corrected. We incorporated their annotation into the /notes fields of the corresponding H. influenzae genes

                                                     The family Pasteurellaceae encompasses several pathogens that infect a wide variety of animals. The present invention relates to virulence genes from Pasteurellaceae. The present sequence is one such virulence gene. The present sequence may be mutated in order to produce an inactive gene. The inactive virulence gene may in turn be used to produce a vaccine, which is useful for treating bacterial infections such as septicemias, bronchopneumonias, rhinitis and wound infections

The present invention describes a gram-negative bacteria comprising a mutation in a gene, where the mutation results in decreased activity of a gene product encoded by the mutated gene. Also described is a method for producting a gram-negative bacteria mutant or an attenuated and can be used in vaccines. The gram-negative bacterial activity Pasteurellaceae bacteria can be used as vaccines in the fields of human medicine or veterinary medicine, and for identifying new antibacterial activity agents that target the virulence genes and their products. ABOR3458 to exemplification of the present invention. (Updated on 07-AUG-2003 to correct OS field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      for identifying their products.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The family Pasteurellaceae encompasses several pathogens that infect a wide variety of animals. The present invention relates to virulence genes from Pasteurellaceae. The present sequence is one such virulence gene. The present sequence may be mutated in order to produce an inactive gene. The inactive virulence gene may in turn be used to produce a vaccine,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Virulence gene; antibacterial; vaccine; bacterial infection; septicemia; bronchopneumonia; rhinitis; wound infection; ss.

The present invention describes a gram-negative bacteria comprising a mutation in a gene, where the mutation results in decreased activity of a gene product encoded by the mutated gene. Also described is a method for producting a gram-negative bacteria mutant or an attenuated a method for Pasteurellaceae bacteria. The mutated genes have antibacterial activity Pasteurellaceae bacteria on he used as vaccines in the fields of human edicine or veterinary medicine, and for identifying new antibacterial agents that target the virulence genes and their products. Abgasss to exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New mutant gram-negative bacteria, useful as vaccines and for identifying new anti-bacterial agents that target virulence genes and their products.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ThrLysAlaMetGluMetValAlaAlaSerLysMetArgLygThrGlnGluArgMetSer 40
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       140
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          160
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    480
                                                                                                                           The present invention describes a gram-negative bacteria comprising a mutation in a gene, where the mutation results in decreased activity of a gene product encoded by the mutated gene. Also described is a method for producting a gram-negative bacteria mutant or an attenuated producting a gram-negative bacteria mutant or an attenuated and can be used in vaccines. The gram-negative bacterial activity and can be used as vaccines in the fields of human medicine or veterinary medicine, and for identifying new antibacterial agents that target the virulence genes and their products. ABOR358 to ABOR358 and ABD84473 to ABD84551 represents sequences used in the exemplification of the present invention. (Updated on 29-AUG-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                420
                                                                 New mutant gram-negative bacteria, useful as vaccines and for identifying
new anti-bacterial agents that target virulence genes and their products.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            40
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               9

The invention relates to the isolation of genes and their encoded proteins from Photorhabdus luminescens. The isolated sequences are sources of probes and primers for detecting the genome of P. luminescens and related species, to study polymorphisms, for gene analysis and for detection/amplification of the genes. Antibodies (Ab) raised against the polypeptides encoded by the genes are used for detection/dentification of P. luminescens, e.g. in foods. The genes, proteins, Ab and cells that carry a gene-containing vector are used to select compounds that modulate, regulate, induce or inhibit expression of the genes in plants, animals or microorganisms other than P. luminescens and are able to alter response or senaitivity to toxins and antibiotics produced by P. luminescens. Cells transformed to express the genes are useful for
                                                                                                         240

recombinant production of the proteins, particularly toxins and antibacterials useful as insecticides, bactericides and fungicides. The genes proteins, vectors containing the genes and Ab are also useful therapeutically (to treat microbial infection by bacteria or fungi that are sensitive to P. luminescens-encoded toxins or antibiotics) and as biopesticides. Other uses of the genes and the proteins are as virulence factors and for identifying targets of human diseases for which P. luminescens is a model (particularly plague and whooping cough). This sequence represents one of the isolated P. luminescens genes

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to new Proteus mirabilis polypeptides and polynucleotides. The invention also relates to antibodies against the polypeptides, a method of polypeptides, a method of generating vaccines for immunising an individual against P. mirabilis, a method for evaluating a compound for the ability to bind P. mirabilis, polypeptide and method for screening test compounds for anti-bacterial activity. The polypeptides and polynucleotides are useful as molecular targets for diagnosing, preventing and treating pathological conditions resulting from bacterial infection, as reagents for diagnosis of bacterial diseases, as components of antibacterial vaccines, as targets for antibacterial diseases, as components of antibacterial vaccines, as targets for antibacterial and seases as the sease of the invention.

The present invention describes a purified or isolated nucleic acid sequence (1) consisting essentially of one of the 93 nucleotide sequences given in AAH81202 to AAH81224, where expression of the nucleic acid in a microorganism is capable of inhibiting proliferation of a microorganism.

(1) have antibacterial and antibiotic activities, and can be used in gene the microorganism, and the manufactured antibiotic is useful feration of the microorganism, and the manufactured antibiotic is useful for reducing the activity or level of a gene product required for proliferation of microorganism in a subject, specificatly humans. The nucleic acids that inhibit bacterial growth or proliferation can be used as antisense therapeutics for killing bacteria. In addition to therapeutic acids that continuity to proliferation can be used as disgenostic tools. For example, complementary to sequences required for proliferation can be used as disgenostic tools. For example, or nucleic acid probes complementary to proliferation-required sequences that are specific for particular species of microorganisms can be used as probes to identify particular microorganisms species in clinical species in a AAH81295 to AAH81497 encode the Escherichia coli proteins of inventing and antibuted and antibute
                                                                                                                                                                                                                                   Novel nucleic acids encoding proteins required for Escherichia coli
proliferation, useful for screening for antimicrobial agents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        oligonucleotides, which are used in the exemplification of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AsnGluLeuGlnLeuValTyrAsnLysAlaArgGlnAlaSerIleThrAsnGluLeuAsn 280
The invention describes a new isolated nucleic acid encoding a Klebsiel pneumoniae polypeptide. Also described are: a recombinant expression vector comprising the nucleic acid, operably linked to a transcription regulatory element; and a cell comprising the recombinant expression vector. The nucleic acid is useful for preparing a vaccine composition against Klebsiella pneumoniae. This sequence encodes a Klebsiella pneumoniae.
                                                                                                                                                                                                                                                                                                                                                                                                                   1 MetAlaGlyAlaLysGluIleArgThrLysIleAlaSerValLysSerThrGlnLysIle

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to Pseudomonas aeruginosa polypeptides and the polymucleotides encoding them. The sequences are useful in diagnosis and the polymucleotides encoding them. The sequences are useful in diagnosis and treatment of pathological conditions, as molecular targets for diagnostics, prophylaxis and treatment of pathological conditions resulting from a bacterial infection, for evaluating a compound, such as a polypeptide, for the ability to bind a P aeruginosa nucleic acid, as components of effective antibacterial targets, as targets for antibacterial drugs, including anti-P. aeruginosa drugs, as templates for recombinant or production of P. aeruginosa derived peptides or polypeptides, as target components for diagnosis and/or treatment of P. aeruginosa-caused infection, and in detection of P. aeruginosa sequences or other sequences of infection, and in detection of P. aeruginosa sequences or other sequences abblights. The sequence data for this patent did not form part of the printed constant in the printed constant in the constant of the printed constant in the patent of the invention of the constant of constants of const

The invention relates to Pseudomonas aeruginosa polypeptides and the polynucleotides encoding them. The sequences are useful in diagnosis and therefore the ability of pathological conditions, as molecular targets for diagnostics, prophylaxis and treatment of pathological conditions resulting from a bacterial infection, for evaluating a compound, such as a polypeptide, for the ability to bind a P. aeruginosa mucleic acid, as components of effective antibacterial targets, as templates for antibacterial drugs, including anti-P. aeruginosa drugs, as templates for recombinant production of P. aeruginosa aceitived peptides or polypeptides, as target components for diagnosis and/or treatment of P. aeruginosa-caused infection, and in detection of P. aeruginosa sequences or other sequences of encomponents species using biochip technology. Sequences ABD1397-ABD1397-Peptessent P. aeruginosa polynucleotides of the invention. Note:

The sequence data for this patent did not form part of the printed contact from Landon and the encomponents. Novel isolated nucleic acid encoding Pseudomonas aeruginosa polypeptide, useful as molecular targets for diagnostics, prophylaxis and treatment opathological conditions resulting from bacterial infection. Disclosure, SEQ ID NO 2405, 455pp, English

This clone is from an A. gambiae BAC library (ND-TAM) provided by F.H. Collins and sequenced by The Institute for Genomic Research (TIGR). The BAC library was generated from A. gambiae PEST strain DNA. All DNA was extracted from newly hatched first instar larvae the minimize the inclusion of DNA from microorganisms that inhabit the gut. The DNA is derived from mixed exces of larvae. The BAC library was constructed at Texas A&M Universty BAC Center University, College Station, Texas A&M Universty BAC Center Seq primer: MI3 Rev Class: BAC ends.

This clone is from an A. gambiae BAC library (ND-TAM) provided by
F.H. Collins and sequenced by The Institute for Genomic Research
DNA. All DNA was extracted from Analy hatched first instar larvae.
To minimize the inclusion of DNA from mixed sexes of larvae. The BAC
Library was constructed at Texas Aba University BAC Center
University, College Station, Texas 77843-2123, USA using a HindIII
Seg primer: M13 For
Class: BAC ends.
                                                                                                                                                                                                                                                                                                                                                                                                                                        GSS 10-DEC-2001

This clone is from an A. gambiae BAC library (ND-TAW) provided by
F.H. Collins and sequenced by The Institute for Genomic Research
(TIGR). The BAC library was generated from A. gambiae PEST strain
DNA. All DNA was extracted from newly hatched first instar larvae
to minimize the inclusion of DNA from microorganisms that inhabit
the gut. The DNA is derived from mixed sexes of larvae. The BAC
library was constructed at Texas A&M Universty BAC Center
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 BH385025
